

GLASS

State-of-the-art glazing units with the possibility to use various glass combinations: safe, anti-burglary, ornamental, tempered and many others. Glazing units with low-emission glass coatings that improve the energy balance of the entire home as well as the use of tempered glass with increased breaking resistance. The glazing units are manufactured in-house, with the use of modern scanners, which eliminates even the smallest material defects and dirtying of the glass. There is a wide variety of glass patterns to suit any interior.

FREEDOM

PSK-Z

- 1 The tilting and sliding mechanism as well as the special fittings make it possible to tilt and slide a door leaf that is even 1.6 m wide, using only little force.
- 2 PSK-Z doors are available in all OKNOPLAST window systems.
- 3 Freedom of use: in the Winergetic Premium and Konzept systems, it is possible to install a two-sided handle with a key lock insert; as a result, the PSK-Z door can be used as an additional entrance door.

PSK ATRIUM

- 1 The hoisted-sliding system makes it possible to slide door leaves up to 1.6 m wide without any problems, thus achieving clear width of the passage of more than 1.5 m.
- 2 The special fittings make it possible to slide the huge leaves with little force.
- 3 The fitting has special catches that guide the leaf to the closed position - all you have to do is turn the handle.
- 4 Microventilation on the circumference of the leaf - in the microventilation position, the sliding door is bolted to prevent breaking into the room.

| INSULATION | SAFETY | COMFORT AND FUNCTIONALITY | APPEARANCE | DURABILITY |
|---|--|---|--|--|
| 7-chamber class A window profile with a 2.8 to 3.00 mm wall thickness and a casing depth of 70 mm and 82 mm | 4 anti-burglar fittings made of specially hardened steel in combination with plastic (PSK-Z) | Tilting and sliding mechanism (PSK-Z) as well as hoisted-sliding mechanism (PSK ATRIUM) | EPDM or PVC-P gaskets in 3 colours, depending on the window system | Reinforced galvanized steel folded multiple times. |
| EPDM or PVC-P gaskets, depending on the window system | The SafetyPlus mushroom striker plates are fastened to the steel reinforcement inside the frame (PSK ATRIUM) | Ventilation on the entire circumference, unnoticeable from the outside (PSK ATRIUM) | Handle with long arm rotation | 5-year warranty |
| Warmatec glass spacer bar available in 3 colours (optional) | 1.75 mm thick window sash reinforcement | Gasket in the bottom groove | Coloured Warmatec frame | Three types of construction |
| | RC2 anti-burglar fitting (optional) | | Glazing with a maximum surface area of up to 9.5 m ² | |

ACCESSORIES

WARMATEC

The new Warmatec frame is a combination of excellent parameters with aesthetic benefits. It is made of two materials - the lower part is made of stainless steel, while the upper is characterized by a low coefficient of the plastic's thermal conductivity. It reduces the formation of a thermal bridge where the glass touches the frame, consequently reducing the Uw coefficient for the entire window.

It is possible to apply on all OKNOPLAST window systems. The Warmatec frame is available in black, brown and grey.

MUNTINS

Internal and glued-in muntins. The muntins are available in a variety of widths and colours, so that they can be matched to any interior, giving it a unique character.

GASKETS

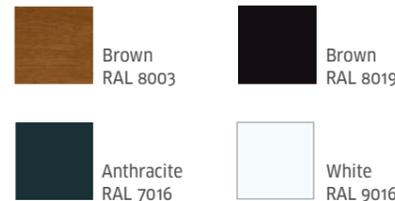

Gaskets are in colours to match the veneer. They are highly resistant to atmospheric conditions: moisture, steam and UV radiation.

VENTILATION SYSTEM

TRICKLE VENTS AND HUMIDITY-CONTROLLED VENTS*

Ensure a good flow of air through rooms to improve the level of comfort and prevent moisture on the walls. The product range includes versions available in a wide selection of RAL colours, on request.

COLOUR

We offer a wide range of RAL colours

POLLUTION-CONTROL AND ANTI-ALLERGEN VENTS

NEW ARRIVAL! The INSOLIO PREMIUM and URBINO PREMIUM pollution-control and anti-allergen vents feature anti-smog and anti-allergen air filters of superior quality. With an extremely high filtering separation efficiency (98% maximum), they provide good indoor ventilation and a barrier to PM10 particulates, which are hazardous to the health.

COLOUR

AEROMAT MINI VENT

The small Aeromat Mini vent is installed in the window rebate.
