DRIVES AND CONTROLS

We live in the age of smart houses, therefore, we provide our clients with various options of shutter control. Clients who are particularly sensitive to environmental considerations may choose a solar-powered drive.

CABLE CONTROL

The individual cable control uses a key switch, as well as central and time automation. By simple replacement of the switch with a radio transceiver, the control system can be expanded to include a remote.

REMOTE CONTROL

The remote control system is based on radio control. The system, which is a type of open control system, enables the expansion of the existing control system at any time.

LUNA

Are you an informed consumer and you value universal solutions? LUNA roller shutters, installed on the exterior of the window, are the perfect choice for you. The option of installation on profiles extending the window frame enables an exceptionally "warm fitting".

- 1 The system is installed on the exterior of the window.
- 2 The elements of the shutter box and the curtain are made of high-grade aluminium.
- 3 The shutters can be installed in existing buildings and new developments.
- 4 The roller shutter can be completely integrated with the building (except for the access panel allowing free access to the shutter mechanism) at the stage of completion of the facade.
- 5 Exceptionally "warm fitting" on the profiles which extend the window frame - the parameters are certified.
- 6 The shutter can be installed on the window lintel, shaped as a reversed letter "L", enabling the shutter box to be hidden and the facade to be finished with thinner and denser insulation.

SOLUTIONS

SOL EVOLUTION

Do you want to avoid heat loss in your home during the winter season and avoid overheating to enjoy cool air in the summer? The solution is SOL EVOLUTION roller shutters, the only product on the market with increased thermal insulation parameters as a standard.

Perfect for both new developments and remodeling of existing buildings.

- 1 The shutters are installed on windows (in the window recess and they become a part of the wall after installation).
- 2 The shutters can be installed in existing buildings and new developments.
- 3 Improved thermal insulation parameters compared to standard solutions (0.8 W/m²K instead of 1.1 W/m²K).

WARMTH

TERRA

Everyone would like to have their house well-protected and, at the same time, consistent in design. Terra is a roller shutter system made of high-grade aluminum, installed on the exterior of the window. The double-checked profile provides an esthetic and wind-resistant solution.

- 1 The shutters are installed on the exterior of the window.
- 2 The elements of the shutter box and the curtain are made of high-grade aluminum.
- 3 The shutters can be installed in existing buildings and new developments.
- 4 Noise reduction properties are confirmed by appropriate certificates.

FUNCTIONALITY

SOL

Daylight is a very important factor influencing our mood in a positive way, yet its excess may also be a nuisance. The solution is SOL roller shutters, which are installed in the window recess, and thus, after installation, they become a part of the wall. In this way, the shutters provide protection not only from sunlight but also against burglary.

- 1 The shutters are installed on windows (in the window recess and they become a part of the wall after installation).
- 2 The shutter box and guide rails are made of PVC.
- 3 The shutters can be installed in existing buildings and new developments.
- 4 The roller shutter can be completely integrated with the building.
- 5 Optional security measures are available - automatic sash fasteners or blocking holders.
